11+ ORIGINAL VISUAL PRACTICE

Worked answer 1 of 8 | NVR rotations

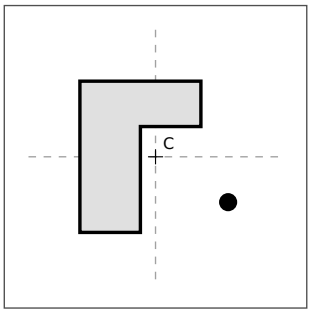

Independent practice. Not an official paper or a complete NVR syllabus.

Turn the whole figure 90° clockwise (a quarter turn) about C. Which option shows the result?

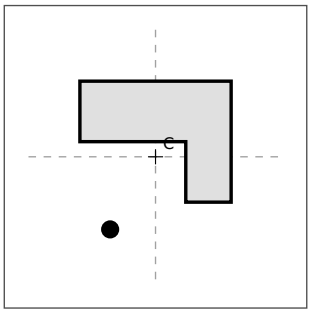

Answer: option A

Option A. C stays fixed. Every corner and the solid dot make the same turn; the figure is not flipped. The dot moves from 24 units right and 15 units below C to 15 units left and 24 units below C. Check the outline as well as the dot.

Before

After: option A

Worked answer 2 of 8 | NVR rotations

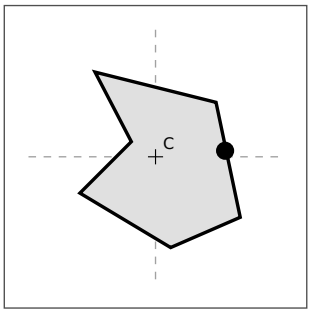

Independent practice. Not an official paper or a complete NVR syllabus.

Turn the whole figure 180° (a half turn) about C. Which option shows the result?

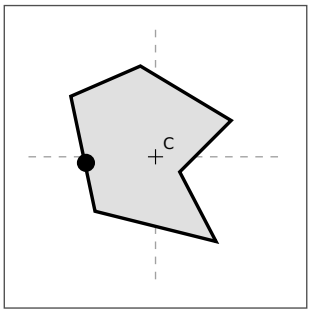

Answer: option D

Option D. C stays fixed. Every corner and the solid dot make the same turn; the figure is not flipped. The dot moves from 23 units right and 2 units above C to 23 units left and 2 units below C. Check the outline as well as the dot.

Before

After: option D

Worked answer 3 of 8 | NVR reflections

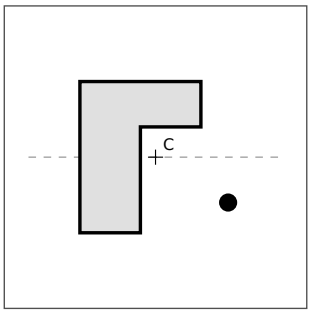

Independent practice. Not an official paper or a complete NVR syllabus.

Reflect the whole figure in the dashed horizontal mirror line through C. Which option shows the result?

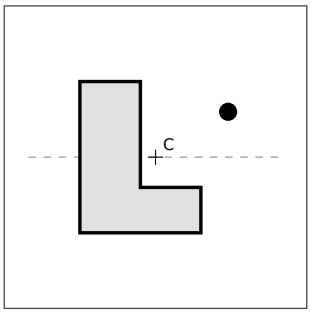

Answer: option B

Option B. Each point crosses the horizontal line at right angles and stays the same distance from it. Top and bottom swap; left/right positions stay the same. The dot moves from 24 units right and 15 units below C to 24 units right and 15 units above C. A turn is not the required mirror image. Check the outline as well as the dot.

Before

After: option B

Worked answer 4 of 8 | NVR reflections

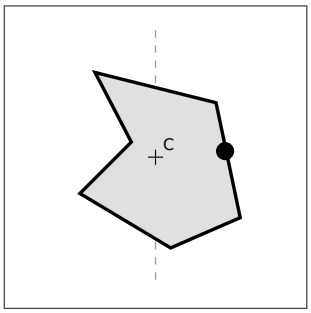

Independent practice. Not an official paper or a complete NVR syllabus.

Reflect the whole figure in the dashed vertical mirror line through C. Which option shows the result?

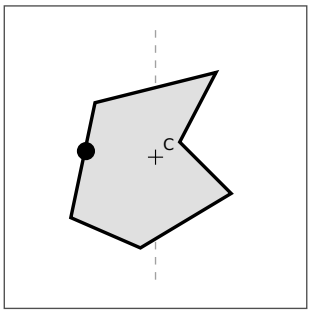

Answer: option C

Option C. Each point crosses the vertical line at right angles and stays the same distance from it. Left and right swap; heights stay the same. The dot moves from 23 units right and 2 units above C to 23 units left and 2 units above C. A turn is not the required mirror image. Check the outline as well as the dot.

Before

After: option C

Worked answer 5 of 8 | NVR shape sequences

Independent practice. Not an official paper or a complete NVR syllabus.

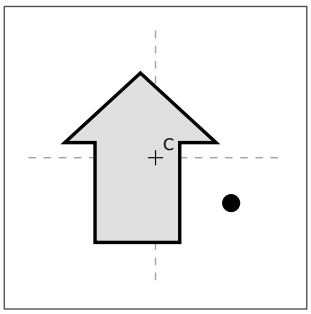

The same turn is used at every step. Which option is the next figure in the sequence?

Answer: option C

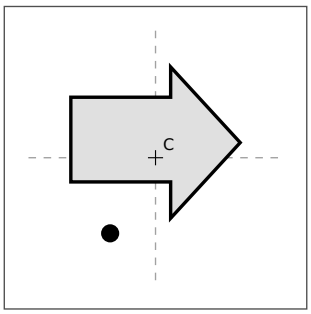

Option C. Each figure turns 90° clockwise about C to make the next frame. Check all three visible transitions, then apply the same quarter turn to frame 4. After four quarter turns the figure returns to its first orientation. Follow both the outline and the solid dot; do not flip the figure.

Last given figure

After: option C

Worked answer 6 of 8 | NVR shape sequences

Independent practice. Not an official paper or a complete NVR syllabus.

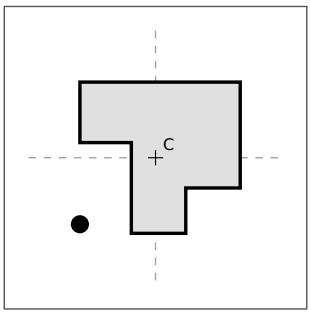

The same turn is used at every step. Which option is the next figure in the sequence?

Answer: option B

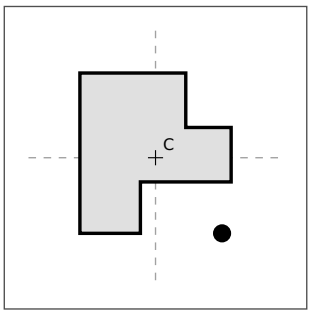

Option B. Each figure turns 90° anticlockwise about C to make the next frame. Check all three visible transitions, then apply the same quarter turn to frame 4. After four quarter turns the figure returns to its first orientation. Follow both the outline and the solid dot; do not flip the figure.

Last given figure

After: option B

Worked answer 7 of 8 | NVR matrices

Independent practice. Not an official paper or a complete NVR syllabus.

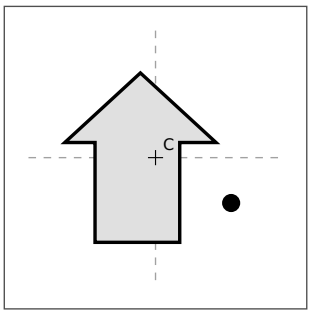

The same turn is used at every step across each row, and the same turn is used down each column. Which option completes the bottom-right cell?

Answer: option D

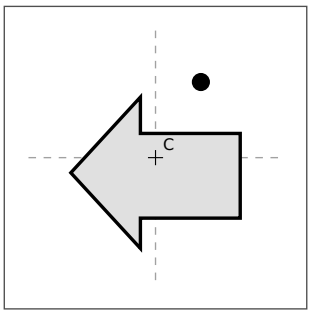

Option D. Across every row, each figure turns 90° anticlockwise about its own C. Down every column, each figure makes a half turn (180°). From the bottom-middle cell, turn 90° anticlockwise; from the middle-right cell, make a half turn. Both give the same bottom-right figure. Follow both the outline and the solid dot; do not flip the figure.

Last given figure

After: option D
